Impact lawn fertiliser

Organic-mineral fertilisers in the **Impact line** unite the benefits of purely organic as well as purely mineral fertilisers.

The mineral components nourish the lawn quickly and reliably, even in slow soils or unfavourable weather conditions. The organic components promote active soil life and nourish the lawn in the long term. The combination promotes healthy and regular plant growth.

Because of this, Impact lawn fertilisers are suitable for both sports pitches and ornamental lawns. The nutrients offered by the different maintenance fertilisers have been adapted to the situational needs of lawn grasses.

Benefits at a glance

- Combines the benefits of organic and mineral fertilisers
- Rapid and sustained effect
- Promotes microorganisms
- Dust-free
- Homogeneous and stable granules
- Good pour and flow properties

A compatible fertiliser for every situation:

- **Rapid greening in spring** – Impact Spring
- **Strengthening for winter** – Impact Autumn and Seed

Recommended fertiliser application

in g/m²

	March	April	May	June	July	Aug.	Sept.	Oct.
Sports pitches, intensive use (25–30 g N per m ² , per year)								
Impact Spring	40–60		40–60	40–60				
Impact Autumn*							40–60	
Ornamental, amenity and home lawns (15–25 g N per m ² , per year)								
Impact Spring	40–60		40–60					
Impact Autumn*							40–60	
Seeding in the spring and subsequent maintenance (15–25 g N per m ² , per year)								
Impact Spring				40–60				
Impact Autumn*		60–100					40–60	

* Impact Autumn and Seed

Product overview and nutrient content

Application quantity	Nutrient content (%)												
	Total nitrogen (N)	Ammonium nitrogen (NA)	Carbamide nitrogen (NU)	Methylene carbamide (NRT)	Organically bound nitrogen (NO)	Total phosphate (P ₂ O ₅)	Phosphate, water-soluble (P ₂ O ₅ , PS)	Potash (K ₂ O)	Magnesium (Mg)	Sulphur (S)	Organic substance (OS)	Slow-release nitrogen %	
Impact Spring Organic-mineral lawn fertiliser. Duration of effect: 2–3 months.	40–60 g/m ²	15	5	2.8	5.4	1.8	4	3	6	1.2	5	30	48
Impact Autumn and Seed Organic-mineral fertiliser for increased winter hardiness. Also ideal for reseeded and regeneration. Duration of effect: 2–3 months.	40–100 g/m ²	8	2.5	3	1	1.5	6	2.3	12	2	6	25	30

Easy application, reliable effect

Uniform spread pattern

Impact fertilisers are exceptionally spreadable, which is important when applying fertiliser to sports pitches. The fertilisers can easily be applied by hand or using a fertiliser spreader. Thanks to their homogenous granulation, they enable a uniform spread pattern and thus a consistent supply of nutrients to the lawn.

Healthy soil stores water and nutrients

The percentage of organic components in Impact fertilisers feeds the microorganisms in the soil. This creates a stable soil structure and thus well-aerated soil, enabling the optimal storage of water and nutrients. Additionally, the Humoperl in Impact Vital promotes soil life. Humic acids and algae extract help to improve soil structure and strengthen plants. Its effectiveness can be boosted even further in combination with aeration measures.

Impact Spring NPK 15+4+6+Mg+S

Organic-mineral lawn fertiliser. For greening after winter. With fast-acting components for rapid greening.

Article no.: **140220**,
Unit: **20 kg**

Impact Autumn and Seed NPK 8+6+12+Mg+S

Organic-mineral fertiliser for use in the autumn for pre-winter strengthening. The nutrient composition is also highly suited to reseeded and regeneration.

Article no.: **140420**,
Unit: **20 kg**
